

# Assignment 11.3

## Problem Statement :-

Create a flume agent that streams data from Twitter and stores in the HDFS.

Solution:-

To stream data to our database from twitter we should have the following pre-requisites.

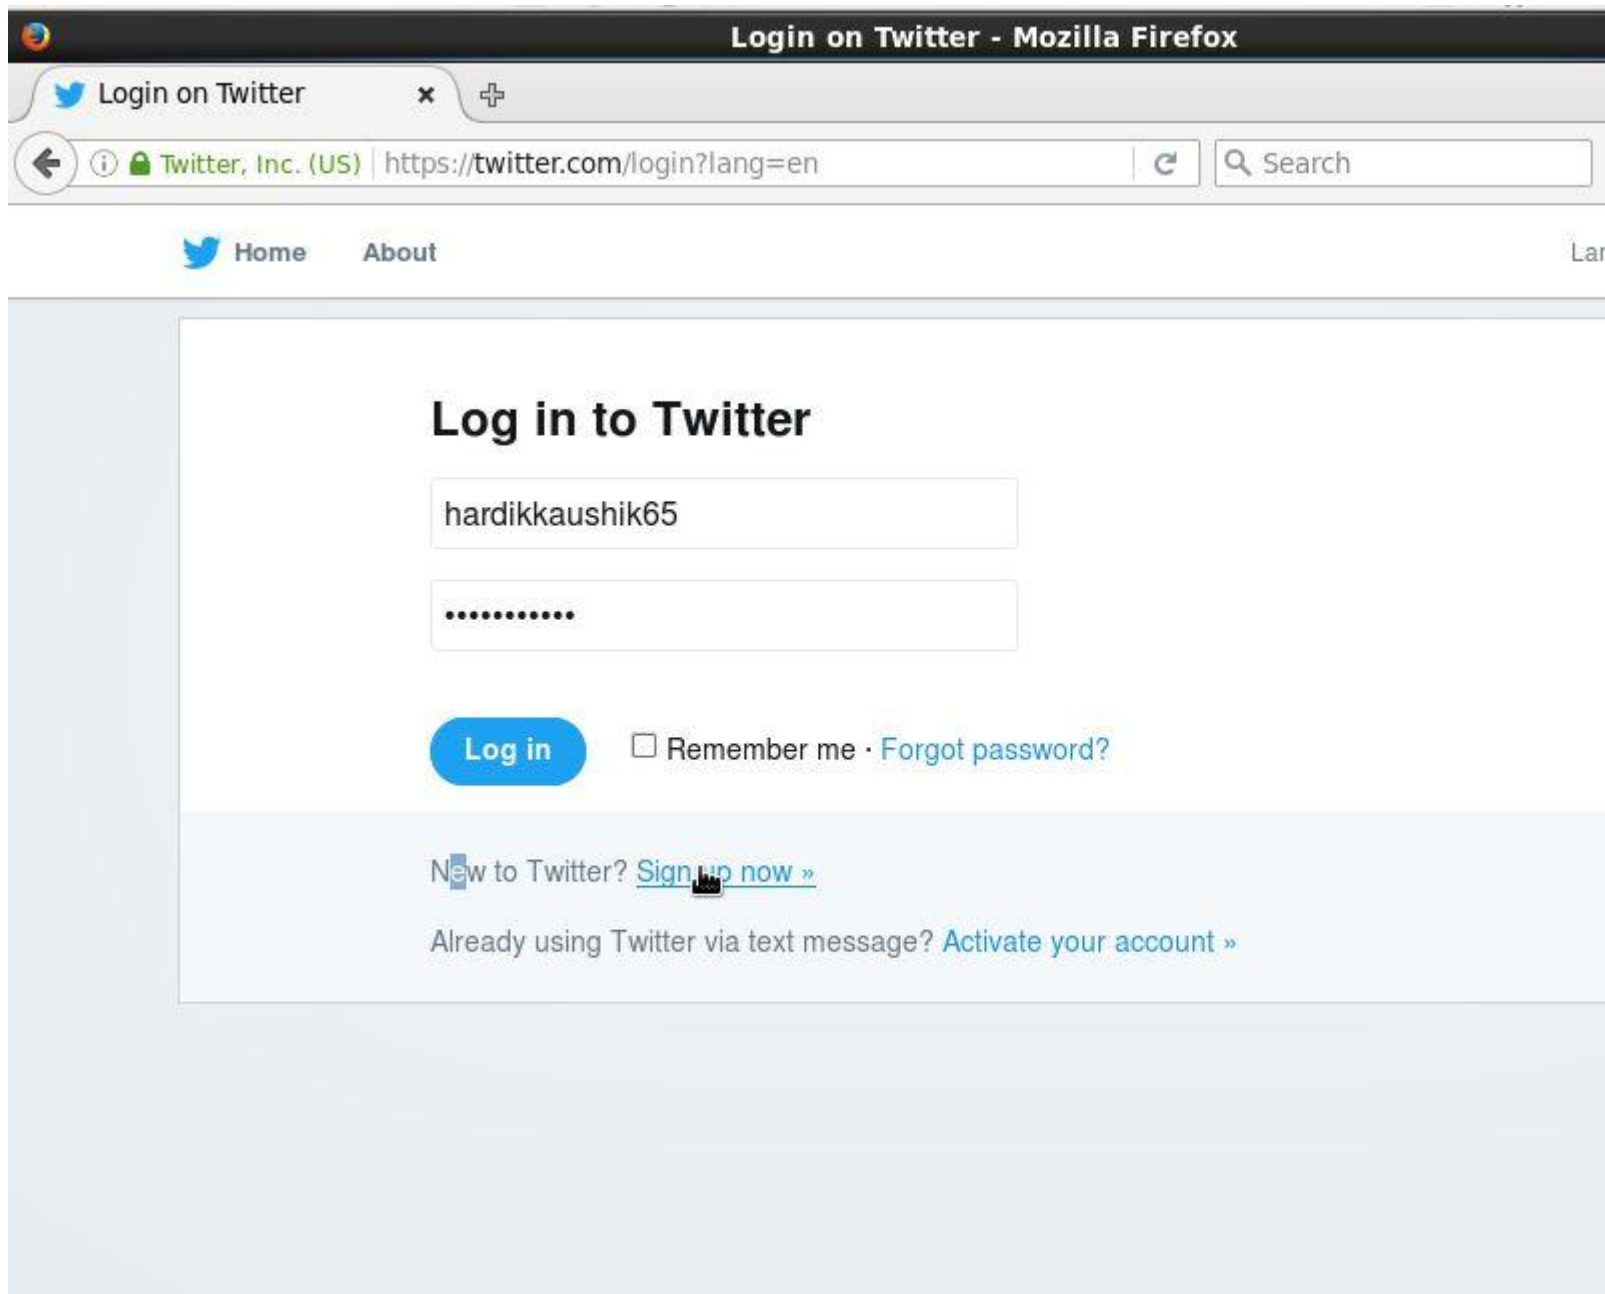

- Twitter account
- Hadoop cluster

Make sure you have below jars placed in your **\$FLUME\_HOME/lib/conf** directory:

- twitter4j-core-X.XX.jar
- twitter4j-stream-X.X.X.jar
- twitter4j-media-support-X.X.X.jar

```
[acadgild@localhost conf]$ cd ../lib
[acadgild@localhost lib]$ ls -lrt | grep -i twitter
-rw-r--r--. 1 acadgild acadgild  56307 Aug 23  2014 twitter4j-stream-3.0.3.jar
-rw-r--r--. 1 acadgild acadgild 284077 Aug 23  2014 twitter4j-core-3.0.3.jar
-rw-r--r--. 1 acadgild acadgild  27698 Aug 26  2014 twitter4j-media-support-3.0.3.jar
-rw-r--r--. 1 acadgild acadgild  14733 May 11  2015 flume-twitter-source-1.6.0.jar
[acadgild@localhost lib]$
```

If the above prerequisites are available we can move to our further step.

Go to the following link and click the 'create new app' button.

<https://apps.twitter.com/app>

# Twitter Apps

You don't currently have any Twitter Apps.

Create New App

 Tweet

# Create an application

## Application Details

### Name \*

Your application name. This is used to attribute the source of a tweet and in user-facing authorization screens. 32 characters max.

### Description \*

Your application description, which will be shown in user-facing authorization screens. Between 10 and 200 characters max.

### Website \*

Your application's publicly accessible home page, where users can go to download, make use of, or find out more information about your tweets created by your application and will be shown in user-facing authorization screens.

(If you don't have a URL yet, just put a placeholder here but remember to change it later.)

Twitter

× Create an application... ×

https://apps.twitter.com/app/new

Search

*tweets created by your application and will be shown in user-facing authorization screens.*

*(If you don't have a URL yet, just put a placeholder here but remember to change it later.)*

### Callback URL

Where should we return after successfully authenticating? [OAuth 1.0a](#) applications should explicitly specify their `oauth_callback` URL on application from using callbacks, leave this field blank.

### Developer Agreement

☒ Yes, I have read and agree to the [Twitter Developer Agreement](#).

Create your Twitter application

Select the 'Keys and Access Token' tab.

Application Management

Your application has been created. Please take a moment to review and adjust your application's settings.

### Your Access Token

*This access token can be used to make API requests on your own account's behalf. Do not share your access token secret.*

Access Token	163073560-tl2NtMiUSBBmOjlqgRfx2DjdFi7K6YggK0fzxBR9
Access Token Secret	ZcsWQx46hpsuWVsUpEd2RhWDFlu4lgvE4Ne9NFWliV0Jl
Access Level	Read and write
Owner	hardikkaushik65
Owner ID	163073560

### Token Actions

Regenerate My Access Token and Token Secret Revoke Token Access

Copy the Flume configuration code from the below link and paste it in the newly created file in the location,

***/home/acadgild/apache-flume-1.6.0-bin/conf/flume\_twitter.conf***

<https://drive.google.com/open?id=0B1QaXx7tpw3Sb3U4LW9SWINidkk>

Update the newly created file with twitter **api** keys like consumer key, Consumer token, Access token and the access token secret code and with the **key words**.

```
TwitterAgent.sources = Twitter
TwitterAgent.channels = MemChannel
TwitterAgent.sinks = HDFS

# Describing/Configuring the source
TwitterAgent.sources.Twitter.type = org.apache.flume.source.twitter.TwitterSource
TwitterAgent.sources.Twitter.consumerKey=6DuloOadcji5BONyJIBU13Jn
TwitterAgent.sources.Twitter.consumerSecret=oDVWXfsmaaOXDg2k58bsyFz3Ctah0IpQYi7K6C34LHI09Z8zqG

[acadgild@localhost lib]$

```

For fetching data from Twitter, Use the below command to fetch the twitter tweet data into the HDFS cluster path.

```
flume-ng agent -n TwitterAgent -f /home/acadgild/hadoop/apache-flume-1.6.0-bin/conf/acadgild.conf
```

```

6172 Jps
[acadgild@localhost lib]$ flume-ng agent -n TwitterAgent -f /home/acadgild/apache-flume-1.6.0-bin/conf/flume_twitter.conf
Warning: No configuration directory set! Use --conf <dir> to override.
Info: Including Hadoop libraries found via (/home/acadgild/hadoop-2.7.2/bin/hadoop) for HDFS access

```

The above command will start fetching data from Twitter and streams it into the HDFS given path.

```

17/11/30 10:12:30 INFO HdfsDataInputStream: Serializer = TEXT, UseRawLocalFileSystem = false

```

Once, the tweet data started streaming it into the given HDFS path we can use 'Ctrl+c' command to stop the streaming process.

To check the contents of the tweet data we can use the following command:

```
hadoop fs -cat /user/acadgild/hadoop/tweets/FlumeData.1512016950366
```

[illegible]

We can observe from the above image that we have successfully fetched twitter data into our HDFS cluster directory using Flume.
